

HughesNet Network Services

High-Availability VPN

A New Standard in Network Reliability

HughesNet 
Broadband Unbound.™

HughesNet® High-Availability VPN—a managed network service delivering superior reliability and performance

The key to an enterprise network is availability. Network downtime can severely impact customer service, the reputation of your business—and your bottom line. So how do you ensure always available broadband network access at a reasonable price?

The HughesNet High-Availability VPN

HughesNet High-Availability VPN is a turnkey managed service that combines the best of satellite and landline technologies to deliver an integrated, fully managed network with unmatched reliability and performance. You

can be confident that your mission-critical applications and processes will continue to be available—even if one of your broadband connections is disrupted.

Welcome to the best of both worlds—a networking solution with two diverse paths that delivers high performance and high bandwidth at an affordable price.

Why Combine Satellite and Landline?

By blending the best of satellite and landline technologies into a fully integrated managed network service, HughesNet High-Availability VPN provides the ultimate in availability with two totally diverse broadband paths for every branch location. If one path experiences an interruption, the other technology provides automatic failover—to keep your business and applications up and running.

Highlights

- Superior network availability up to 99.9+%
- Optimal performance for mission-critical applications
- Fully managed service from a **single** provider
- HughesNet Customer Gateway to track network activity

Extreme availability

Keep your mission-critical applications running up to 99.99+% of the time with HughesNet High-Availability VPN service. By coupling two diverse access technologies at all your enterprise locations, you significantly minimize the risk of business disruptions due to network outages.

- Satellite and landline broadband connectivity at each location
- Automatic failover if either access link is disrupted if either broadband access link is disrupted.
- Complete protection of every site and path
- Mission-critical applications stay online

Enhanced application performance

HughesNet High-Availability VPN employs advanced routing techniques to ensure optimal performance of your critical applications—so you know each one is operating at its peak. Utilizing policy-based routing, Hughes assigns applications to the path that delivers the best performance. And with two broadband connections at each location, you'll have the bandwidth you need to meet your growing application requirements.

The integrated managed service advantage

HughesNet High-Availability VPN delivers comprehensive network and service management for your integrated satellite and landline broadband network. Experience the benefits of HughesNet's fully managed service:

- Turnkey deployment including network design, configuration, installation, maintenance, and customer help desk
- Proactive fault management of your customer premises equipment and network
- Performance management of your network and applications
- Comprehensive, enterprise-grade service level agreements (SLAs)
- Superior customer care and nationwide on-site field service
- Experienced program management

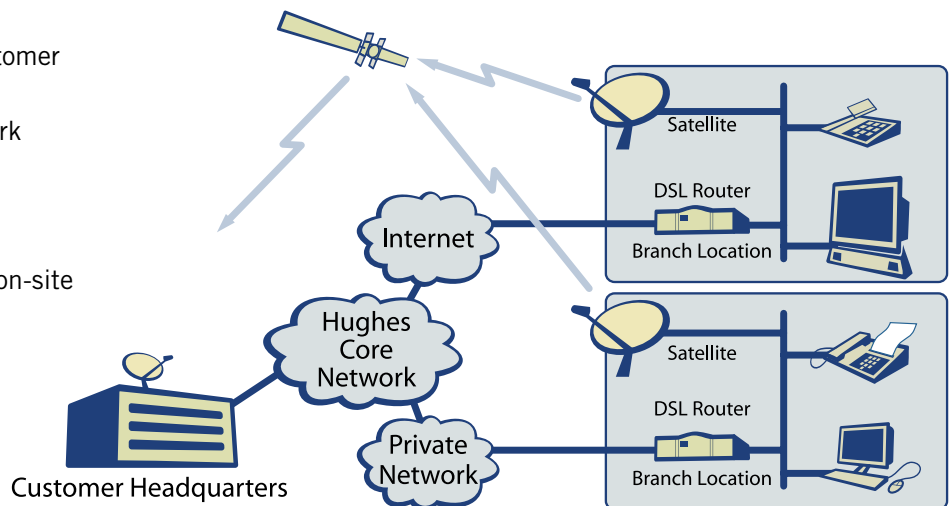

Bird's eye view

The HughesNet Customer Gateway Portal provides you a view in to your network, offering you proactive monitoring, fault management, and reporting capabilities so you can know what is going on in real-time with your network.

Highest security standards

You can be confident that HughesNet High-Availability VPN provides a fully secure, end-to-end network to safeguard your data and systems.

- Standards-based technologies, such as IPSec tunneling and AES encryption
- PCI-compliant architectures available for all broadband access technologies
- Optional private network implementation (network traffic doesn't touch the Internet)

A Snapshot of Hughes

- Worldwide market leader in broadband satellite services and technology
